

The whole of Whitewebbs Park inc. open space and woodland =97 hectares

Spurs are leasing approx. 55 hectares which is about 57% of the park

Open space taken for Spurs pitches and facilities **Approx 17 ha** But Spurs have not given an undertaking that they will not extend their area of pitches

People will have access to the woodland area paths but these are generally in a poor state for six months of the year. Most visitors use the open area of the former golf course

Remaining public open space **16 hectares**

Spurs are taking up approximately half of the open space. Their fencing and tree planting will further reduce the open space available to the public

Spurs claim that the default fall back use of the park is a golf course.

This untrue, the default fall back use is Open Space for the people of Enfield.

See the 1931 Lease and other supporting evidence from the LMA

Object to the amount of land Spurs are taking and to the loss of open space for the people.
